Press is the abbreviation of press, hydraulic press, oil press, press refers to a molding machine used for industrial products through pressure forming, generally using hydraulic cylinder, so it is also called oil press. In the building materials industry, press is press brick machine for short, press and break up the dynamic press brick machine and automatic hydraulic brick machine.

1. Trend In the coming years there is an increasing demand for press machines in the regions of North America and Europe that is expected to drive the market for more advanced press machines. Increasing of automotive fields expenditures, more-intense competition, launches in introducing new products, increasing of spending on general industry, retrofitting and renovation of old technology, increasing adoption of press machines in developing countries will drive growth in global market.
2. Consumption The consumption volume of press machines is related to downstream industries and global economy. As there will always be some uncertain in the global economy in the following years, the growth rate of press machines industry may not keep that fast. But it is surely forecasted that the market of press machines is still promising.
3. Price The product average price declined in the past few years due to the technology development, the average price will keep the trend

in the few future years due to increasing mature manufacturing technology and lowering cost of raw materials. 4. Cost The impact on the cost and availability of raw materials and certain components is uncertain due to potential supply changes. The costs of raw materials have a significant impact on the level of expenses. If the prices of raw materials and related factors such as energy prices increase, and if new companies cannot pass those price increases on to customers, their results of operations and financial condition would suffer.
