Abstracts

The global Printing Machine market was valued at 175.27 Million USD in 2021 and will grow with a CAGR of 4.1% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

With changing requirements of commercial printing, manufacturing of printing machines is slated to become more complex. Stringent environmental regulations are pressurizing the printing machine manufacturers towards optimizing the use of inks containing VOCs. In 2017 and beyond, the demand for offset lithography machines will be the highest, compared to other product-types, in the global market. With respect to digital printing machines, offset lithography machines offer competitive advantage across multiple parameters. Firstly, the interfacial surface properties of offset lithography machines make the printing surfaces ink-absorbent and the non-printing surfaces of the machine ink-repellent. This saves additional costs on maintenance, which makes it the most economical printing machine in the global market. Furthermore, provisions for quality control and efficiency of sub-machineries such as dampening system and ink system enable high-quality, consistent printing through a lithographic process.
