Process Gas Compressor is mechanical device that increases the pressure of process gas such as argon, ethylene, fluorine, helium, hydrogen, oxygen, neon, nitrogen, silane, TFE, xenon and other gases, by reducing its volume. Compressors are similar to pumps: both increase the pressure on a fluid and both can transport the fluid through a pipe. As gases are compressible, the compressor also reduces the volume of a gas. Along with the development of Chinese domestic Process Gas Compressors, Chinese domestic Process Gas Compressors has been very mature and advanced, and the performance distance has been shortening compared with the imported Process Gas Compressors. As large demand of high-end products at home and abroad, many companies began to enter the field of high-end. Currently, the Chinese Process Gas Compressors industry is not only begin to transit to high-end Process Gas Compressors products, while still extend in the resource-rich land and downstream industry chain.
