The global Propulsion Systems market was valued at 22653.27 Million USD in 2021 and will grow with a CAGR of 3.89% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A propulsion system generally consists of an aircraft engine and some means to generate thrust, such as a propeller or a propulsive nozzle. A propulsion system must achieve two things. First, the thrust from the propulsion system must balance the drag of the airplane when the airplane is cruising. And second, the thrust from the propulsion system must exceed the drag of the airplane for the airplane to accelerate. In fact, the greater the difference between the thrust and the drag, called the excess thrust, the faster the airplane will accelerate. Regionally, North America is the biggest Consumption area of Flight Propulsion Systems in the world and china is the most potential market with the fastest growing rate of 9.48%
