The global Propylene Glycol (PG) market was valued at 3930.44 Million USD in 2021 and will grow with a CAGR of 7.22% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Propylene glycol (PG) is a clear, colorless liquid with the consistency of syrup. It is practically odorless and tasteless. It is hygroscopic (attracts water), has low toxicity and outstanding stability, as well as high flash and boiling points, low vapor pressure and broad solvency. In addition, propylene glycol is an excellent solvent for many organic compounds and is completely water-soluble. Propylene glycol is used by the chemical, food, and pharmaceutical industries as antifreeze when leakage might lead to contact with food. The Food and Drug Administration (FDA) has classified propylene glycol as an additive that is "generally recognized as safe" for use in food. It is used to absorb extra water and maintain moisture in certain medicines, cosmetics, or food products. It is a solvent for food colors and flavors, and in the paint and plastics industries.

Propylene glycol is also used to create artificial smoke or fog used in fire-fighting training and in theatrical productions. The regions of Europe, North America and Asia (ex. China) are the main consumption bases, while Europe holds 21.56% consumption share, North America holds 20.16%, and Asia (ex. China) holds 21.13% consumption share in 2015. They occupy 62.84% of the global consumption in total.
