### Abstracts

The global Prosthetic Liners market was valued at 485.23 Million USD in 2021 and will grow with a CAGR of 3.65% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The prosthetic liner acts as a sort of 'second skin' between the movable soft tissue of the residual limb (muscles, tissue, skin) and the hard shell of the socket. This reduces movement and friction between the skin and prosthetic socket and therefore reduces the forces in the socket described earlier. The prosthetic liner connects your residual limb to the prosthetic, cushioning the sensitive skin on the residual limb and thereby alleviating problems such as pressure points. The technical barriers of Prosthetic Liners are high. The manufacturing bases relative concentration; some of the key players dominating this market are Ottobock, Ossur, Willow Wood, ALPS and others.
