Protein Hydrolysate a mixture of amino acids prepared by splitting a protein with acid, alkali, or enzyme which widely are used as a feed for various animals due to its high nutritional value. Rising demand for healthy and nutrient enriched animal feed coupled with growing consciousness about livestock health should stimulate the demand of protein hydrolysate for livestock feed application. Protein hydrolysate provides sufficient peptides and collagen for the healthy growth of poultries, swine, goats, sheep, and equine. Fish protein hydrolysates are highly used in the poultry industry due to its high content of protein, calcium and fats which are essential for the growth of broilers. Fish residues are used in poultry and cattle feed which consequentially results in delivering of healthier milk and eggs.
