The global Proton Therapy Instrument market was valued at 703.65 Million USD in 2021 and will grow with a CAGR of 3.56% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Proton therapy is a type of radiation therapy. It USES a 200-ton device to shoot high-energy particles at the speed of about 2/3 of the speed of light to destroy tumor cells and rarely damage normal human tissues. The technique was first used in patients in the 1950s and perfected in the late 1970s. In recent years, with the increasingly mature technology, proton therapy has been accepted by more and more patients in many countries and countries in the world. The district is actively preparing to construct and strive to construct proton therapy center. Proton therapy devices in the world are mainly concentrated in the United States, Japan, Europe and other regions. Affected by the purchase cost and maintenance cost, the main consumption areas are also concentrated in these areas. In addition, the application scope of proton therapy is gradually expanded. There are proton therapy centers in Australia, mainland China, South Korea, Taiwan and South Africa. Proton therapy instrument manufacturers have obvious concentration, high threshold, and very high technical and capital requirements. The whole market is mainly dominated by IBA and varian, among which IBA alone has a cumulative market share of nearly 50%. In the future, with miniaturization and price reduction, the concentration of manufacturers is expected to gradually reduce. In terms

of technology, the major proton accelerators are cyclotron and synchrotron, among which the share of synchrotron is gradually increasing. The development prospect of the whole proton therapy instrument industry is broad, and the global order growth is obvious. In particular, a large number of hospitals or units with intention to build proton therapy centers have emerged in China in recent years, providing a large development space for manufacturers who intend to enter the field of proton therapy
