PTFE (polytetrafluoroethylene) CCL is a type of CCL (Copper Clad Laminate) that used PTFE as base material. It has excellent dielectric properties, has obvious advantages in the high frequency circuit board. At present, in developed countries, the PTFE CCL industry is generally at a more advanced level. The world's large enterprises are mainly concentrated in USA and Japan. Meanwhile, foreign companies have more advanced equipment, strong R & D capability, and leading technical level. However, foreign companies' manufacturing cost is relatively higher, compared with Chinese companies. With the development of Chinese PTFE CCL production technology, their share in the international market is increasing, and competitiveness in the international market gradually increases. China's PTFE CCL industry has developed into a national wide status with certain research and production capacity, industry product mix has gradually improved, currently. China has become a large international consumption country of PTFE CCL, but the production technology is relatively laggard to produce some low-end product. Although the new production lines are increasing, and the high-end product is still relying on import.
