The global PVC Compound market was valued at 1008.76 Million USD in 2021 and will grow with a CAGR of 3.19% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The most versatile thermoplastic material commercially available in a variety of compounded forms to cover a wide range of hardness and flexibility applications is PVC. It has good physical strength and excellent resistance to water and chemicals. The PVC characteristics are when the flame is withdrawn and difficult to ignite and have self-extinguishing. PVC resin is liable to degradation on heating and is a very tricky material to process, unless properly compounded. This places a great deal of responsibility on the compounding technologist. The use of compounding is to mix the resin and other additives into a homogeneous state of processing. These compounds use for the manufacture of finished products. It is impossible to process PVC resin without the addition of certain compounding ingredients such as heat stabilizers and lubricants. The global PVC Compound industry has a low concentration. The major manufacturers are concentrated in USA, and Europe, such as Westlake Chemical, Mexichem, Aurora Plastics, Benvic Europe and INEOS Compounds. At present, Westlake Chemical is the world leader, holding 23.5% production market share in 2016.
