The global PVC Modifier market was valued at 313.39 Million USD in 2021 and will grow with a CAGR of 1.22% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

PVC is a kind of important of plastics in the world. Generally speaking, original PVC resin is with poor fluidity, poor impact strength, poor weather resistance, decomposed easily when they are heated and other disadvantages. These disadvantages are limiting the application of PVC resin. Therefore, it is necessary that to add various PVC modifiers to modify the properties of PVC resin, for making PVC resin can process easily and can be used for lots of fields. At present ACR (acrylic based polymer), MBS (Methacrylate Butadiene Styrene), CPE (Chlorinated Polyethylene) are the major PVC modifiers in the market. China is the largest manufacturing base of PVC modifier presently, which held about 30.85% production marker share in 2015. Since China is the largest consumer of PVC resin, at the same time the country has become the largest consumer of PVC modifier as well, with consumption of 336K MT in 2015. PVC resin is one of the most widely used general resins currently. Considering this, PVC modifier insiders are still optimistic on the market, estimating that demand of the PVC modifier will continue to increase in the next 6 years and will reach to 2261.0K MT in 2022. As for the consumption area, India will impact the PVC modifier market as the country is experiencing fastest growth in construction materials, which indicates great

market potential for the PVC modifier, the consumption of PVC modifier will increase to 414.8K MT.
