The global PVD (Physical Vapor Deposition) Coaters market was valued at 436.21 Million USD in 2021 and will grow with a CAGR of 4.61% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

PVD coating is a vacuum deposition process that has received increasing use in recent years and is no longer seen as a laboratory process. It has been scaled up to handle large complex part geometries at an affordable cost. Many companies have realized benefits from converting their product from electroplating to PVD coating. The PVD process provides a more uniform deposit, improved adhesion up to six times greater in some cases, wider choice of materials to be deposited and there are no harmful chemicals to dispose of. Because PVD coating is more environmentally friendly and chemical disposal costs are minimal, the cost of PVD coating and electroplating is very close on some products. However, it is expected that the market will increase from 2021 that growth owing to increased usage in electronics and advanced packaging Industry and optics and glass Industry. Increased investment in PVD (Physical Vapor Deposition) Coaters by leading players is expected to favorably impact market growth over the forecast period. For the PVD (Physical Vapor Deposition) Coaters industry, the market is concentrated. Applied Materials, Optorun and Shincron are the leader companies in North America. In this study, the sales market for PVD (Physical Vapor Deposition) Coaters was divided into 3 geographic regions. USA occupied the largest

sales market share with 86% in 2019. It is mostly contributed by the great demand.
