Abstracts

The global Quantum Cascade Lasers market was valued at 272.46 Million USD in 2021 and will grow with a CAGR of 2.2% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Quantum cascade lasers (QCLs) are semiconductor lasers that emit in the mid- to far-infrared portion of the electromagnetic spectrum. Unlike typical interband semiconductor lasers that emit electromagnetic radiation through the recombination of electron-hole pairs across the material band gap, QCLs are unipolar and laser emission is achieved through the use of intersubband transitions in a repeated stack of semiconductor multiple quantum well heterostructures. North America held the largest share of the quantum cascade lasers market due to the high technological adoption of QCLs in industrial, medical, and military and defense industries in the region. APAC is expected to witness the highest growth rate between 2018 and 2023 due to the presence of industrially developing economies in this region such as China and India.
