Rabies vaccine is an active immunizing agent used to prevent infection caused by the rabies virus. The vaccine works by causing your body to produce its own protection (antibodies) against the rabies virus. Every year more than 5.5 million people have died for rabies, mostly in Asia and Africa. With the implementation of China`s two-child policy, downstream demand for rabies vaccine will not decrease in the coming few years. Rabies vaccine is an irreplaceable product, so profile of rabies vaccine is very large. But due to its security requirements than the general drugs, the entire vaccine industry from R & D, production to distribution, sales and after-sales feedback link subject to very strict regulation. So, production companies are not as much as we imagined.
