The global Radar Sensor market was valued at 7441.65 Million USD in 2021 and will grow with a CAGR of 11.23% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A radar sensor is an electronic device that identifies the position and velocity of a distant object such as a vehicle, aircraft, or ship. Radar sensors identify electromagnetic emissions with the help of radio receivers. When the transmission is detected, the person in the vehicle is informed. Currently, the GPS technology is installed into radar sensors, and it aids the storage of locations indicated by the sensor when the user reaches their destination in addition to detecting objects, the radar sensors provide information such as range, speed, direction, and Doppler velocity. North America is expected to hold the largest share of the radar sensor market in 2023; the market in APAC is expected to grow at a high rate between 2018 and 2023. The increased focus on safety and security features in the automobile sector in China, India, and Japan is the major factor driving the growth of the radar sensor market in APAC.
