The global Radiation Curable Coatings market was valued at 5363.65 Million USD in 2021 and will grow with a CAGR of 4.16% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Radiation curable coatings are the polymer coatings, which are cured (cross-linking) when exposed to a radiation of ultra violet light (UV) or electron beam (EB). Radiation curable coatings are generally composed of a base resin (e.g, oligomers or a blend of oligomers and monomers) formulated with other functional components. Other formulation components include reactive monomers, pigments, fillers, defoamers, adhesion promoters, flattening agents, wetting agents, slip aids, and stabilizers. Global Radiation Curable Coatings key players include Royal DSM, PPG, Sherwin Williams, Henkel, AkzoNobel N.V., etc. Global top five manufacturers hold a share over 15%. Asia-Pacific is the largest market, with a share nearly 45%, followed by North America and Europe, both have a share over 45 percent. In terms of product, UV-Curable is the largest segment, with a share about 90%. And in terms of application, the largest application is Wood, followed by Plastic, Metal, etc.
