Abstracts

The global Radiation Dose Monitoring market was valued at 1809.47 Million USD in 2021 and will grow with a CAGR of 4.43% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Radiation Exposure Monitoring is a framework developed by Integrating the Healthcare Enterprise, for utilizing existing technical standards, such as DICOM, to provide information about the dose delivered to patients in radiology procedures, in an interoperable format. The growing adoption of EHR systems, increasing initiatives for the implementation of health information exchanges (HIEs), growing awareness on radiation safety, increasing radiation exposure to patients, and increasing number of diagnostic imaging exams across the globe are other factors driving the growth of the radiation dose management market. However, the lack of in-house education and training on radiation dose management, lack of understanding amongst physicians and technologists towards dose optimization approaches, and low adoption of radiation dose management solutions in emerging countries are some of the factors restraining the growth of this market.
