Radio frequencies are radio signals that range between 3 KHz to 300 KHz. Components of radio frequency are the building blocks that enable connectivity in various electronic devices that are currently used. The radio frequency components enable the transmission and identification of frequencies. There exist various kinds of radio frequencies such as voice frequencies, medium frequencies, ultra high frequencies and super high frequencies among others. North America is expected to dominate the radio frequency component market owing to huge number of early technology adopters and the highly established telecom sector in the North American region. Asia-Pacific is expected to experience a growth owing to the rise in consumer disposable income which is projected to lead to increase in adoption of consumer electronic products with connectivity features. Europe is expected to experience huge demand of radio frequency component market with increasing use of electronic devices for industrial, commercial and residential purposes.
