Abstracts

The global Railway Sleepers market was valued at 736.27 Million USD in 2021 and will grow with a CAGR of 3.91% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Railway sleepers are predominantly produced from wood or concrete. Wooden sleepers are usually produced from hardwood, although soft wood is also possible depending on the application. Before the appearance of Concrete Sleepers, steel sleepers were also commonly used in the construction of railway tracks. Concrete sleepers can be produced from both new and recycled concrete. A railway sleeper is a rectangular support for the rails in railroad tracks. Generally laid perpendicular to the rails, ties transfer loads to the track ballast and subgrade, hold the rails upright and keep them spaced to the correct gauge. Railway sleepers are traditionally made of wood, but pre-stressed concrete is now also widely used, especially in Europe and Asia. Steel ties are common on secondary lines in the UK; plastic composite ties are also employed, although far less than wood or concrete. From the view of region, Asia-Pacific and Europe have a larger sales market share in 2018 which together account for 74.02%, and will witness a stable growth in following years. South America hold a market share of 6.63% will still play an important role which cannot be ignored. Any changes from Asia-Pacific might affect the development trend of Railway Sleepers. North America also play important roles in global market, but it will witness the comparatively lowest

growth rate within selected regions.
