The global Rehabilitation Robotics market was valued at .98 Million USD in 2021 and will grow with a CAGR of 17.15% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Rehabilitation Robotics is a field of research dedicated to understanding and augmenting rehabilitation through the application of robotic devices. Rehabilitation robotics includes development of robotic devices tailored for assisting different sensorimotor functions (e.g. arm, hand, leg, ankle), development of different schemes of assisting therapeutic training, and assessment of sensorimotor performance (ability to move) of patient; here, robots are used mainly as therapy aids instead of assistive devices. Rehabilitation using robotics is generally well tolerated by patients, and has been found to be an effective adjunct to therapy in individuals suffering from motor impairments, especially due to stroke. The global Rehabilitation Robotics sales was about 1.6 K Units in 2017 and is expected to grow at a CAGR of 20.6% from 2017 to 2025. The global Rehabilitation Robotics market was valued at USD 78.4 million in 2017 and is expected to reach USD 278.8 million by 2025. The technical barriers of Rehabilitation Robotics are relatively high, resulting in high level concentration degree. The key companies in Rehabilitation Robotics market are AlterG, Hocoma and Ekso Bionics, etc. The enterprises are concentrated in USA and Europe. USA is the largest production and sales country, occupied about 30% of global sales market in 2017.
