The global Reinforced Thermoplastic Pipes market was valued at 5632.31 Million USD in 2021 and will grow with a CAGR of 6.85% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

There are two types of reinforced thermoplastic tubes. One is aimed at improving the resistance to internal pressure. Usually a three - layer structure, the inner and outer layer is a variety of thermoplastics, the middle layer is the reinforcement material. The other class requires not only increased resistance to internal pressure, but also increased resistance to external pressure. It is usually a multi-layer structure (more than 5 layers). In addition to various thermoplastic layers, there are internal pressure resistant, external pressure resistant and other functional layers. It is mainly used for oil and gas transportation.
