Abstracts

The global RF over Glass (RFoG) market was valued at 1337.33 Million USD in 2021 and will grow with a CAGR of 8.67% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

RFoG is a type of passive optical networking that proposes to transport RF signals that are now transported over copper (principally over hybrid fiber and coax cable), over a Passive Optical Network. In the forward direction RFoG is either a stand-alone Point to Multi-Point system or an optical overlay for existing Passive Optical Network (PON) such as Gigabyte Passive Optical Network (GPON). Reverse RF support is provided by transporting the upstream or return path into on a separate return path or wavelength. As the downstream consumption usually follows with developed and rapid economic growth areas, such as BRICS, the developed areas` prefers investing to underdevelopment regions these years. Facing today`s competition from incumbent operators there is no better way for cable TV network operators than optical fibers for fast broadband connection. An important milestone is radio frequency over glass (RFoG) which allows cable TV network operators to adhere to the well-known and popular DOCSIS broadcasting method while at the same time fiber can be used instead of coaxial cable to access subscribers. The industry is relatively concentration, the key brand include Arris , Cisco Systems, Alloptic (CTDI), Adtran, WISI, Bktel, Teleste, Lootom, Enablence and so on. Among them, Arris is the leader. The leading companies

own the advantages on better performance, more abundant product`s types, better technical and impeccable after-sales service. Consequently, they take the majority of the market share of high-end market. The industry is expected to remain innovation-led, with frequent acquisitions and strategic alliances adopted as the key strategies by the players to increase their industry presence. Meanwhile, optimize product mix and further develop value-added capabilities to maximize margins. Significant and lasting barriers make entry into this market difficult. These barriers include, but are not to: (i) product development costs; (ii) capital requirements; (iii) intellectual property rights; (iv) regulatory requirement; and (v) Transitions` unfair methods of competition. Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this area, the future will still have more new investment enter the field. Even so, the market is intensely competitive .The study recommends the new entrants just having money but without technical advantage and upstream and downstream support do not to enter into this field.
