RFID smart cabinets are cabinets are important components of smart hospital industry. RFID technology endows cabinets with the uttermost convenient for accurate identification and a large extend on efficiency. With computing systems and platform software, uses of RFID smart cabinet usually operate with a desktop to control the whole system of RFID smart cabinet, which could be possibly used in the clinic document management or pharmacy control system. Vendors on this area mostly claim they build on scientific calculation and software to construct their system or solution for a more efficient smart hospital environment. With the development of global smart health industry, and growing need for building smart and automatic pharmacy and clinic document system, the demand of RFID Smart Cabinet constantly increased in these years. As a result, the total production and sales of RFID Smart Cabinet continuously increased in recent years. Regional market for RFID smart cabinet presented North America dominated the global RFID smart cabinet demand, with the largest consumption market which accounts for 50.32% of global market share in 2015. Growing adoption rates of healthcare information technologies and the entry of private healthcare establishments into emerging markets such as India, China, Brazil and

Argentina is also expected to drive market growth over the next six years. On an average, a hospital loses more than 15% of its assets in a year owing to fraud or misplacement of hospital supplies. In order to eliminate such losses and enhance time efficiency, hospitals are focusing on upgrading their infrastructure and incorporating RFID technology to keep track of their inventories. Therefore, the healthcare sector is the predominant end-user of RFID smart cabinets, accounting for 93.05% of the revenue share in 2015. Rising initiatives undertaken by healthcare institutions to curb costs via the adoption of an efficient inventory management solution is expected to be a key driver for RFID smart cabinet demand. The report also observes that government regulations aimed at efficient inventory management of medical supplies in healthcare institutions coupled with the current low market penetration rate of RFID technologies in these institutions is expected to fuel market demand over future 5-10 years. Continuous R&D and ongoing clinical trials have resulted in better product designs that incorporate advanced technological features. The development of the healthcare industry and its infrastructure have led to an increase in healthcare expenditure. Developed countries in the Americas and Europe spend the most on healthcare. Developing countries have to increase their spending dramatically to provide basic health insurance coverage, develop a primary healthcare service system, and improve the availability of medications in rural and suburban areas. This is expected to result in the reformation of public hospitals and healthcare facilities, thereby increasing the demand for laser equipment, propelling market growth. Conclusively, the RFID Smart Cabinet manufacture industry has an expected future, the markets are still growing over time. Our analysis indicates that Europe is the largest consumption market according to our report. RFID Smart Cabinet for machine tools is the most prevalent kind among all the others. Our prediction is that the RFID Smart Cabinet market will grow over time.
