The global Rhenium market was valued at 172.54 Million USD in 2021 and will grow with a CAGR of 2.75% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Rhenium is a dense silvery-white metal that has a very high melting point and a heat-stable crystalline structure, making it exceptionally resistant to heat and wear. It is usually extracted as a by-product of molybdenum smelting and is used especially in superalloys, catalysts, and many other applications. Global volumes grew at low speed, due to the stability of super alloy and catalyst demand for the past years. Longer-term growth projections are now around 3%. The industry is highly concentrated in terms of production area, with Chile, USA and Poland as the major supply area.
