Abstracts

The global Rice Starch market was valued at 17.77 Million USD in 2021 and will grow with a CAGR of 5.76% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Rice starch is characterized by very small granules in the range of 2-8 μ m, being much smaller than those of other cereals, tubers and roots, such as corn and potato. Its granule size is comparable to the size of fat globules, therefore ideally suited to mimic a full bodied fatty mouthfeel. It provides creamy textures and can serve as natural fat replacer. It can be widely used in food industry, pharmaceutical industry, chemical industry and Cosmetic & Personal Care Industry. Rice starch can be classified into two types: food grade rice starch and industry grade rice starch. Food grade rice starch is widely used in food industry and pharmaceutical industry. Industry grade rice starch is widely used in cosmetic industry, papermaking industry, spinning industry and other industries. Major raw materials for rice starch are rice and caustic soda. On the global market, supply of raw materials is very full. But many manufacturers discontinued in recent years due to the product gross margin are low and the price of corn starch is lower than rice starch in some application. All manufacturers in the world are committed to the improvement of production technology. In recent two years, Chinese manufacturers can almost catch up with the world's leading technology. Such as Anhui Lianhe and Anhui Le Huan Tian Biotechnology company can produce food

grade rice starch and industry grade rice starch. We tend to believe this industry is an emerging industry, and the consumption increasing degree will show a smooth growth curve. For product prices, the slow downward trend in recent years will maintain in the future as competition intensifies. Besides, prices gap between different brands will go narrowing gradually. Also, there will be fluctuation in gross margin.
