A road roller, sometimes also called roller-Road Roller, or just roller, is a type of engineering vehicle used to compact soil, gravel, concrete, or asphalt in the construction of roads. In addition, rollers are also used at landfills or in agriculture. In some parts of the world, road rollers are still known as steam rollers, regardless of their method of propulsion. Due to its application nature, the road roller industry tends to exhibit a relatively high correlation with the growth rate of general economy, particularly in those emerging economies whereby the economic growth model is largely investment driven, including countries like China, India, Brazil and other fast-growing southeastern nations. Because in those countries, the economy is still rapidly expanding and many roads, airports and industrial parks need to be built every year in an effort to lower the business cost for enterprises, which creates enormous demand for road rollers of various types.
