Rolled Annealed Copper Foil is made by roll copper into thin sheet and it is one kind of foil produced by rolled and annealed pattern, mainly used for electromagnetic shielding and antistatic. The process yields a smooth copper foil with a grain structure that is in the plane of the foil sheet. This results in a copper that has very good bending properties and therefore well suited to flexible circuit applications. In the coming years there is an increasing demand for rolled annealed copper foil in the regions of Asia that is expected to drive the market for more advanced rolled annealed copper foil. Increasing of FPC and lithium battery used fields expenditures, more-intense competition, launches in introducing new products, retrofitting and renovation of old technology, increasing adoption of rolled annealed copper foil of APAC will drive growth of the market. The consumption volume of rolled annealed copper foil is related to downstream industries and global economy. As there will always be some uncertain in the global economy in the following years, the growth rate of rolled annealed copper foil industry may not keep that fast. But it is surely forecasted that the market of rolled annealed copper foil is still promising. The product average price declined in the past few years due to the technology development, the average price will keep the trend in

the few future years due to increasing mature manufacturing technology and lowing cost of raw materials.
