The global Rotary Friction Welding market was valued at 17.4 Million USD in 2021 and will grow with a CAGR of .95% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Rotary Friction Welding: a solid-state process in which one part is rotated at a high speed, and then pressed against another part that is held stationary. The resulting friction heats the parts, causing them to forge together. Rotary Friction Welding ? most popular type of friction welding and used for parts where at least one piece is rotationally-symmetrical such as tube or bar. As the technology of Rotary Friction Welding Machines is relatively mature and the downstream market, especially for automobile is growing fast, so there are lots of enterprises in the Rotary Friction Welding Machine market. The high-end rotary friction welding machine was mainly produced in Japan, Europe and United States because their advanced R&D lever, but most of the products were consumed in developing countries especially in Southeast Asia where the machining accuracy is lower. Considering the truth that manufacturing of rotary friction welding machine is highly Technology-Intensive, so it is a wise decision for a new company which only has money while lack of professional R&D team and core technologies to keep calm when has a plan to enter this field.
