The global Rubber Conveyor Belt market was valued at 5211.23 Million USD in 2021 and will grow with a CAGR of 1.68% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The conveyor belt is an endless band that transfers the material conveyed between two points. A conveyor belt is comprised of a reinforced member, or carcass, and a protective covering. Conveyor belts are generally a composite of rubber or some elastomer such as PVC and fabric or some other reinforcement. The elastomer is the external covering which provides wear ability and protection from the handling environment. The fabric carcass internally serves as the strength bearing member for supporting the load and to control stretching of the belt. Viewed from the demand side, the current demand for conveyor belt product is relatively low, mainly because that many using industries like steel industry is in trouble. Of course, there is also a certain space in the conveyor belt product demand market, but basically showing the scarcity of high-end products, low-end products is excess capacity, there is a large market demand for high-end products to seize market share of imports.
