The global Rubber Gloves market was valued at 464.93 Million USD in 2021 and will grow with a CAGR of 8.24% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Rubber gloves, as the name implies, are gloves made of various types of rubbers, either in a combination with other materials, such as textiles, plastics, or only rubber. They cover a wide range of applications, ranging from medical gloves to utility gloves for almost any kind of work. This type of gloves can be supported, meaning they have a rubber coating under a textile or knit underlying layer, or unsupported, meaning they are made of rubber only. The most common application for rubber gloves is chemical protection while working with dangerous substances such as oils, acids or hazardous solvents. They can also be worn during dishwashing, as they can protect the skin and hands from the detergent. Rubber gloves can also be used while working in care center when treating young children or older people, specifically when dealing with fecal matter or urine. The technical barriers of rubber gloves are relatively low, and the rubber gloves market concentration degree is lower. The supply of the rubber gloves is concentrated in the China and Southeast Asia regions such as Malaysia, Indonesia and Thailand. The four countries totally produce about 95% of the total rubber gloves in 2017. Driven by the global annual consumption of medical examination and surgical gloves from the healthcare industries, as well as the greater demand of cleanroom gloves from

manufacturing industries, the demand of rubber gloves is largely concentrated in the developed countries. USA, Europe and Japan are dominating the market consume, with more than 74% sales share in these three countries, although they only make up around 20% of the world total population. However, in recent years, China, India, and other developing countries are catching up, as their populations grow rapidly and expenditure on healthcare also sees an upward trend. It is thus believed that the future growth of the market will be mostly driven by the developing countries. The industry can be further classified as Natural Rubber (NR) gloves and Synthetic Rubber (SR) gloves. Latex rubber gloves were once the most popular type of rubber gloves in the market. However, they have been gradually substituted by different types of synthetic rubber gloves because people get allergic to latex rubber. In 2017, Nitrile Gloves takes more market share, with about 46.49% and 106126 Million Pieces output.
