A rugged display is a display that is specifically designed for operating reliably in harsh environments and conditions such as strong vibrations, extreme temperatures, and wet or dusty conditions of use. These displays are designed for rough use generally required under the above-mentioned conditions. Rugged smartphones and handheld computers held the largest share of the market, in terms of products, in 2016. Most government, defense, transportation, and industrial applications require display devices that are rugged and portable in nature. Smartphones and handheld computers are efficient alternatives to custom rugged display devices in such applications.
