Abstracts

The global Running Shoes market was valued at 1356.3 Million USD in 2021 and will grow with a CAGR of 4.06% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Running Shoes are footwear designed for off-road travel and include many design features not found on a road-specific model. Running Shoes involve running or walking in an outdoor environment on a natural terrain, taking advantage of the geographical features offered by each region. Running events are becoming more popular, and for competition it is even more important than ever to be light on your feet and quick. For this reason running shoes are designed to tackle hard impacts, but are also lightweight and airy. Currently, the main material of running shoes is mesh fabric, EVA, rubber, glue and others. But different manufacturers will choose raw materials with special functions. The main consumption group is outdoor enthusiasts.
