The global RV Reducer market was valued at 1656.86 Million USD in 2021 and will grow with a CAGR of 6.97% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

RV (Rotate Vector) reducer derived from the planetary reducer, consisting of the front stage of a planetary gear reducer and the rear stage of a cycloid reducer. The RV reducer has the characteristics of compact structure, lightweight, large gear ratio, high positioning accuracy and transmission machinery with self-locking function under certain conditions. It is one of the most commonly used reducers. From a global perspective, Japan currently holds the core technology of RV Reducer and forms a technical barrier to high-performance reducers. It is difficult for companies in other regions to reach their technical level. In China, the number of companies producing RV Reducer is about ten or so, and most of them are not scaled up. They are only satisfied with the needs of the low-end market and have a small scale, and they are positioned as low-end product markets.
