Surface Acoustic Wave Filters or SAW Filters are compact, low-cost RF filters that can be used in a wide range of applications up to 3 GHz. SAW filters operate by converting electrical energy into acoustic or mechanical energy on a piezoelectric material. To do so these filters uses interdigital transducers (IDTs). The IDTs have interleaved metal electrodes on either end of the device which converts an electrical signal into an acoustic wave and then back to an electrical signal.SAW Filters are mainly monopolized by Japan, USA and Germany enterprises. Chinese manufacturers have broken through the bottleneck and are rising strongly. Murata is the leading manufacturer in the global SAW Filters market with the revenue market share of 46.06%, in terms of revenue, These 10 listed companies accounted for 96.33% of the market share in 2019.
