Sawmill is a wood where logs are cut into lumber. They are the forest products and mainly used for the needs of the construction, joinery, furniture and packaging industries. They are produced for native forests and plantations. There are two sawmill products: softwood and hardwood. Sawmill downstream is wide and recently construction and furniture have acquired increasing significance in various fields of sawmill. Globally, the sawmill market is mainly driven by growing demand for construction which accounts for nearly 73.48% of total downstream consumption of sawmill in global. The raw materials of sawmill are from forests or plantations and most companies have their own forest. Sawmill can be classified to softwood and hardwood and hardwood is more expensive than softwood. Softwood is ideal for a wide range of residential, commercial and industrial construction. Hardwood timber is used for furniture, flooring, decks and pergolas. Global market is expected to witness significant growth on account of rising applications, so in the next few years, sawmill production will show a trend of steady growth. In 2022 the production of Sawmill is estimated to be 574 M m³. On product prices, the slow downward trend in recent years will maintain in the future.
