Scaffolding is a temporary rigid structure made of still, bamboo or timber. The primary aim of constructing a scaffold is to create a platform on which mason can work at different heights. Scaffolds also help to lift materials for the immediate uses at different heights. As necessary equipment for the construction industry and other applications, the market development of scaffolding is directly affected by the market situation of construction industry. The construction industry worldwide is facing a downturn over the two years, and the demand of scaffolding is also reducing. But it is forecasted that the market will recovery in the following years. Worldwide, there are quite a lot of manufactures of scaffolding, as the technology is mature and market is not concentrated. For example, there are thousands of small plants of scaffolding with low technology. The competition is quite fierce. As the cost of raw materials is reducing over the past three years and the weak demand, the price of scaffolding price is reducing year by year. And it is forecasted that the price will continue to reduce. Despite the presence of competition problems, due to the demand of urbanization worldwide and the demand of building, there is also large space for scaffolding. There will be more new investors entering this field in the future. The rental and setting up service business of

scaffolding is also an opportunity for investors who are interested in this industry.
