The global Sclareolide market was valued at 48.39 Million USD in 2021 and will grow with a CAGR of 0% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Sclareolide is a sesquiterpene lactone natural product derived from various plant sources including *Salvia sclarea*, *Salvia yosgadensis*, and cigar tobacco. It is a close analog of sclareol, a plant antifungal compound. It is used as a fragrance in cosmetics and has been more recently marketed as a weight loss supplement, though there is no clinical evidence to support this effect. The global consumption value of sclareolide increases with the 1.10% average growth rate. Europe is the mainly consumption region due to the bigger demand of downstream applications. In 2016, consumption volume of Europe reached 99.88 MT, which occupied 82.74% % of the global consumption volume. We tend to believe this industry is a rising industry, and the consumption increasing degree will show a smooth growth curve. And the price presents decreasing trend according to the economy development status and international competition. Also, there is fluctuation in gross margin.
