A simple definition of a screener is a machine with surface used to classify materials by size. Screening is defined as the mechanical process which accomplishes a division of particles on the basis of size and their acceptance or rejection by a screening surface. In the coming years there is an increasing demand for Screener in the regions of China that is expected to drive the market for more advanced Screener. Growth in government budgets in the principal countries, recovery of mining fields, more-intense competition, launches in introducing new products, retrofitting and renovation of old technology, increasing adoption of Screener will drive growth in North America and Europe markets. Globally, the Screener industry market is low concentrated as the manufacturing technology of Screener is relatively matures than some high-tech equipment. And some enterprises, like Metso, Sandvik, Terex, etc. are well-known for the wonderful performance of their Screener and related services. At the same time, Europe, occupied 39% production market share in 2017, is remarkable in the global Screener industry.
