A screw press is a type of machine press in which the ram is driven up and down by a screw. The screw shaft can be driven by a handle or a wheel. It works by using a coarse screw to convert the rotation of the handle or drive-wheel into a small downward movement of greater force. The overhead handle usually incorporates balls as flyweights. The weights helps to maintain the momentum and thrust of the tool to make it easier to operate. In the coming years there is an increasing demand for screw press in the regions of North America and Europe that is expected to drive the market for more advanced screw press. Increasing of environmental fields expenditures, more-intense competition, launches in introducing new products, increasing of spending on general industry, retrofitting and renovation of old technology, increasing adoption of screw press in APAC will drive growth of global markets. Globally, the screw press industry market is low concentrated as the manufacturing technology of screw press is relatively matures than some high-tech equipment. And some enterprises, like FKC, ANDRITZ, Ishigaki Company and Haarslev, etc. are well-known for the wonderful performance of their screw press and related services. At the same time, Europe, occupied 23.02% production market share in 2017, is remarkable in the global screw
