Scrubber dryer is a device used to clean the floor. The basic scrubber dryer was introduced in the 1920s. The modern scrubber dryer, which is also referring automatic scrubber dryer, was not invented until the middle of the 20th century. It uses a system that generally involves spraying the floor with a combination of cleaning chemicals and water, scrubbing the floor to break up spill, residue and dirt, and then a squeegee-vacuum combination that absorbs the used water, leaving the floor completely dry and clean. Now, scrubber dryers are widely used in these public places like supermarkets and modern malls. In the coming years there is an increasing demand for scrubber-dryers in the regions of North America and Europe that is expected to drive the market for more advanced scrubber-dryers. Increasing of commercial and industrial used fields expenditures, more-intense competition, launches in introducing new products, retrofitting and renovation of old technology, increasing adoption of scrubber-dryers of APAC will drive growth of the market. The consumption volume of scrubber-dryers is related to downstream industries and global economy. As there will always be some uncertain in the global economy in the following years, the growth rate of scrubber-dryers industry may not keep that fast. But it is surely forecasted that the market of

scrubber-dryers is still promising.
