Abstracts

The global Sealless Pumps market was valued at 2893.21 Million USD in 2021 and will grow with a CAGR of 4.31% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Sealless pumps don't require a seal because the wet end of the pump and the motor are contained separately. The sealless technology eliminates the need for a seal altogether making it safer and more environmentally friendly. Sealless pumps are also easier to use and require less maintenance. Main sealless pumps include canned motor pumps, magnetic pumps and diaphragm pumps. Unsealed pump plays an important role in many fields including chemical industry, medicine, food industry and general manufacturing industry. Huge downstream demand is driving the trade in sealed pumps. The main sales markets are in North America and China. After sweeping China and North America, it also has strong purchasing markets in Europe and Japan. North America is the region with the largest investment income in the world without sealed pumps, but China is the country with the largest trading volume, with a revenue market share of over 40% in 2019, and the most potential development direction is the food industry.
