The global Semiconductor Automated Test Equipment (ATE) market was valued at 357.06 Million USD in 2021 and will grow with a CAGR of 3.11% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Semiconductor Test Equipment consists of a variety of instruments or cards for testing memory, digital, and mixed-signal at the wafer and Packaged stages, and single-chip system (SoC) components that are also in the wafer and Packaged stages. At present, in the foreign industrial developed countries the Semiconductor Test Equipment industry is generally at a more advanced level, the world's large enterprises are mainly concentrated in Americas and Japan. Meanwhile, foreign companies have more advanced equipment, strong R & D capability, the technical level is in a leading position. The market size of semiconductor automatic test equipment is expected to grow due to the growing SoC system and the surge in demand for consumer electronics products. In a rapidly changing market environment, device performance continues to challenge the limits of ATE system functionality. Especially nowadays, the increase of analog and mixed-signal ICs has made ATE equipment originally used for testing pure digital ICs unable to meet new test requirements. The elimination of test equipment has accelerated and the test cost has increased.
