The global Semiconductor Laser market was valued at 60.76 Million USD in 2021 and will grow with a CAGR of 4.59% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A semiconductor laser (LD) is a device that causes laser oscillation by flowing an electric current to semiconductor. The mechanism of light emission is the same as a light-emitting diode (LED). Light is generated by flowing the forward current to a p-n junction. In forward bias operation, the p-type layer is connected with the positive terminal and the n-type layer is connected with the negative terminal, electrons enter from the n-type layer and holes from the p-type layer. When the two meet at the junction, an electron drops into a hole and light is emitted at the time. The world leading players in the Semiconductor Laser market are Sony, Nichia, Sharp, Ushio, Osram, TOPTICA Photonics, Egismos Technology, Arima Lasers, Ondax, Panasonic, ROHM, Hamamatsu, Newport Corp, Finisar, Mitsubishi Electric, Huaguang Photoelectric, QSI and so on.
