The global Serial EEPROM market was valued at 741.23 Million USD in 2021 and will grow with a CAGR of 5.73% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

EEPROM (electrically erasable programmable read-only memory) is user-modifiable read-only memory (ROM) that can be erased and reprogrammed (written to) repeatedly through the application of higher than normal electrical voltage. Unlike EPROM chips, EEPROMs do not need to be removed from the computer to be modified. However, an EEPROM chip has to be erased and reprogrammed in its entirety, not selectively. It also has a limited life - that is, the number of times it can be reprogrammed is limited to tens or hundreds of thousands of times. In an EEPROM that is frequently reprogrammed while the computer is in use, the life of the EEPROM can be an important design consideration. The Serial EEPROM market covers 16Kbit, 32Kbit, 64Kbit, 128Kbit, 256Kbit, 512Kbit, 1Mbit, 2Mbit, etc. The typical players include Microchip, ON Semiconductor, STMicroelectronics, Renesas Electronics, ROHM, Giantec Semiconductor, Adesto Technologies Corporation, Inc., etc. Among the key players of Global Serial EEPROM Market, STMicroelectronics profits most in 2019 and recent years, while Microchip and Giantec Semiconductor Corporation ranked 2 and 3. The market share of them is about 36%, 23% and 9% in 2019, respectively. Nowadays, there are eight mainly types of Serial EEPROM, including 16Kbit, 32Kbit, 64Kbit,

128Kbit, 256Kbit, 512Kbit, 1Mbit and 2Mbit. 16Kbit is the main type for Serial EEPROM, and the 16Kbit reached about 40% of global market share in 2019.
