Service robot is an actuated mechanism programmable in two or more axes with a degree of autonomy, moving within its environment, to perform intended tasks. Autonomy in this context means the ability to perform intended tasks based on current state and sensing, without human intervention. A service robot is a robot that performs useful tasks for humans or equipment excluding industrial automation application. Japan alone had 26% revenue share of the global service robotics market from 2011 to 2015. With the domestic policies supporting, it is expected that the Japan market will sharply strengthen in the next five years, which will account for about 31% revenue market share. Service robots are viewed as necessary devices for providing individuals with a high quality of life and social well-being. With this view, the development of nursing and medical robots developed for elderly individuals is strongly expected.
