The global Session Border Controller (SBC) market was valued at 643.13 Million USD in 2021 and will grow with a CAGR of 2.75% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A session border controller (SBC) is a dedicated hardware device or software application that governs the manner in which phone calls are initiated, conducted and terminated on a Voice over Internet Protocol (VoIP) network. An SBC provides security, interoperability, routing and other functions in a Session Initiation Protocol (SIP) network. It defines and monitors the quality of service (QoS) status for all sessions, ensuring that the callers can actually communicate with each other and that emergency calls are delivered correctly and prioritized above all other calls. An SBC can also serve as a firewall for session traffic, applying its own quality of service (QoS) rules and identifying specific incoming threats to the communications environment. Service provider class Session Border Controller (SBC) is designed to handle the high call volumes that the carrier will experience and provide full range of features required for carrier operations. Enterprises require different features than those provided by carrier session border controllers, including support for T1/PRI interfaces, small sites, local resiliency and interoperability certification with enterprise unified communications (UC) vendors. Session border controllers are increasingly being packaged as part of a larger sale of unified communications (UC) and contact center solutions in conjunction with

SIP trunking in recent years. Growth in the SBC market is being driven by businesses' use of Session Initiation Protocol (SIP) trunking services, interconnection between disparate systems and support of remote workers and cloud UC services. The global Session Border Controller industry has reached a production of approximately 46193 Units in 2015. Session Border Controller has historically had a stable growth profile driven primarily by growth in telecom and consumer electronics industry.
