Sevoflurane is a halogenated general inhalation anesthetic drug. It's a volatile liquid for inhalation, a nonflammable and nonexplosive liquid administered by vaporization. In the next five years, the global sevoflurane industry will be concentrated in Europe, the United States and China. With the rapid development of Chinese technology, China's sevoflurane market is expected to grow rapidly. Despite the competition issue, investors are still optimistic about the field due to the obvious global recovery trend; more new investments will enter the field in the future. With the development of technology, sevoflurane will continue to develop in the direction of refinement. With the increase of labor cost, energy cost and GMP cost, the cost of producing sevoflurane in emerging countries is rising, the research capacity is low, and the main sevoflurane is still concentrated in developed countries.
