## Abstracts

The global Sheet Molding Compound (SMC) market was valued at 185.38 Million USD in 2021 and will grow with a CAGR of 3.94% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Sheet molding compound (SMC) is both a process and reinforced composite material. The composite is a 'ready to mold' glass or carbon fiber reinforced polyester material primarily used in compression molding. The SMC sheets are manufactured by dispersing long strands of chopped glass fibers or carbon fibers on a bath of polyester resin, vinylester resin or epoxy resin. A key variable in the performance of SMC producers is raw material costs, specifically the speed at which any increase can be passed through to customers. The materials of SMC include SMC-specific unsaturated polyester resin, glass fiber, carbon fiber, etc. The prices of SMC-specific unsaturated polyester resin follow the oil price, with a lag, and movements can inject volatility into producer margins. In general, most producers structure the majority of their contracts to include a 'pass through' clause that smooth the impact.
