Abstracts

The global SiC Fibers market was valued at 18.89 Million USD in 2021 and will grow with a CAGR of 37.78% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Silicon carbide fibers range from 5-150 micrometres in diameter and composed primarily of silicon carbide molecules. Depending on manufacturing process, they may have some excess silicon or carbon, or have a small amount of oxygen. Relative to organic fibers and some ceramic fibers, silicon carbide fibers have high stiffness, high tensile strength, low weight, high chemical resistance, high temperature tolerance and low thermal expansion. North America is the largest consumer of SiC fibers across the globe, in terms of both, value and volume. The growth of the North America SiC fibers market is driven by the increasing consumption of SiC fibers in commercial and military aircraft engines. The US is the largest consumer of SiC fibers globally, in terms of value and volume and is expected to strengthen its position further during the forecast period.
