The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Silicon Carbide has properties remarkably similar to those of diamond - it is one of the lightest, hardest, and strongest technical ceramic materials and has exceptional thermal conductivity, resistance to acids, and low thermal expansion. Silicon Carbide is an excellent material to use when physical wear is an important consideration because it exhibits good erosion and abrasive resistance, making it useful in a variety of applications. Silicon carbide (SiC) powders are compatible with a wide range of materials. The SiC Powder industry can be broken down into several segments, Nano SiC, Sub-micron SiC, etc. Across the world, the major players cover Fiven, Fujimi Corporation, etc. Note: the report covers powder product with particle size less than 100µm. Market concentration of Silicon Carbide is medium, with top 10 players takes global revenue share of around 65% in 2019. Leading players like Nanomakers, Washington Mills, Fujimi and Hagan's have broad product range and downstream applications. North America, Europe and Asia-Pacific are major consumption region of SiC powder, with a combined revenue share of nearly 98% in 2019. The market of Silicon Carbide powder can be broadly classified as Sintered Parts, Filling Material, etc in terms of application field. Sintered Parts is the major application of SiC powders. The

market of Silicon Carbide powder can be classified as Nano SiC ($<100\text{nm}$), Sub-micron SiC ($0.1-1\mu\text{m}$) and Other ($1-100\mu\text{m}$) in terms of diameter.
